We offer a wide and varied range of managed hosting services to make it easy for our clients to determine which solution fits them best. This document was designed to outline the different types of hosting solutions available for you to host your website. Regardless of the package, all our hosting services guarantee a 99.99% uptime along with unlimited bandwidth and I/O throughput. We also provide secure, managed email hosting and increased security configuration for $20/month as an addition to any of our hosting packages. For more complete breakdown of our services, and other packaged plans, please see our Breakdown of Services manual.

Limited VPS Hosting ($39.99) Host)

Typical Shared Hosting
From Large Companies

Limited VPS hosting is what most would call the most affordable introductory web hosting solution without sacrificing too much on speed, security, and reliability. This type of hosting is recommended for basic web sites that do not expect to receive large amounts of traffic or rely on complex back end systems or scripts for functionality. If you're not after lightning fast load times and are looking for a simple but effective way to get your website online, limited VPS hosting is worth your consideration. Our limited VPS hosting plans include unlimited website edits up to 1 hours' worth of labour per month.
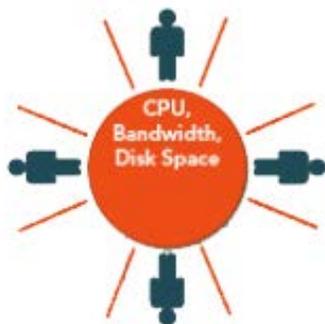

While VPS servers are a considerably better solution than basic shared web hosting from big companies, they are still resource limited for mid to large size websites. While VPS servers are great for typical websites with everyday visitors and interactions, if you have any plans of upgrading your website overtime or mitigating any transactions on your website via Ecommerce or other sales platforms, we highly recommend you look into either limited dedicated or dedicated hosting as you will outgrow a VPS hosting server's moderate resource limitations and hosting capabilities rather quickly.

Informal Development
Limited VPS Hosting

Unlike other hosting providers however, we do not cram as many websites as possible into the server's file hosting capabilities. Our limited VPS servers are more capable than standard shared hosting plans you may find on other large hosting companies and should be more closely compared to a cheap dedicated server from the likes of companies such as GoDaddy, Namecheap, or Bluehost.

We monitor the performance of all our hosting servers to ensure that no website is eating up resources at a rate that limits another. We guarantee high end performance with lightning fast load times. Our hosting servers come included with insured SSL encryption and on/off site data backup services

Limited Dedicated Hosting ($59.99) Host)

Informal Development

Limited Dedicated Hosting

Our limited dedicated hosting servers offer a significant performance increase over our VPS deployments. These are higher spec'd machines that can handle large amounts of burst traffic with ease.

We limit our limited dedicated hosting servers to four website instances per server to ensure there is no shortage of resources for even the complicated processes. This is made sure by significantly increased RAM and CPU processing power. These servers are designed to run standard content management systems without breaking a sweat. Our limited dedicated hosting servers provide high performance accessibility for mostly all types of websites.

Our limited dedicated hosting plans also include unlimited website edits up to 2 hours' worth of labour. Limited dedicated hosting is not ideal for websites looking to host complex CMS systems or conduct transactions and manage payment processors as your resources will be limited to an extent. If unlimited top end performance, security, and reliability is what you are after, look no further than our individual dedicated hosting solutions.

Unlike our limited hosting packages, our individual dedicated hosting service is available in three separate tiers. All prices in this document refer to Tier 1 servers. This is the ideal tier for small to medium sized businesses that receive around 250,000 visitors or less every month. Please contact us regarding pricing for our second and third tier servers as these are enterprise grade servers that are custom spec'd to fit your business needs.

Individual Dedicated Hosting ($79.99) Host)

Complete Solitude

Can use as much hard drive space and CPU the machine can handle

If you're looking to seriously invest into your business venture or website, we recommend not taking any chances and going with one of our unlimited resource, individual dedicated servers. These high spec'd machines have no resources limitations as your website is the sole instance of that machine. This type of setup is ideal for Ecommerce platforms, large or heavily trafficked websites, and database operations. If you plan to handle financial transactions on your website, we would recommend an individual dedicated server as they have higher levels of encryption, increased overall security configurations, and increased data redundancy.

We offer customized server configuration including manual setup in LAMP stack, WAMP stack, cPanel, CentOS, and legacy PHP versions. Our servers can be configured to run lightning fast, complex CMS applications such as WordPress or Magento.

By subscribing to an Informal Development hosting service, you are joining the umbrella of nearly 50 satisfied clients over the course of 7 years. We guarantee that you will be pleased with the quality of our service.
